Forward Looking Statement

Some of the statements in this document may be deemed to be "forward-looking statements". All statements in this document, other than statements of historical facts, that address events or developments that management of the Company expects, are forward-looking statements. Although reasonable assumptions, such statements are not guarantees of future performance and actual results or developments may differ materially from those in the forward-looking statements. The Company undertakes no obligation to update these forward-looking statements if management's beliefs, estimates or opinions, or other factors, should change. Factors that could cause actual results to differ materially from those in the forward-looking statements, include market prices, exploration and development successes, continued availability of capital and financing, and general economic, market or business conditions. Please see the public filings of the Company at www.sedar.com for further information.

Milosz Mielniczuk, P.Geo Qualified Person (QP)

Aben's Vice President of Exploration is the Qualified Person as defined by National Instrument 43-101 and has reviewed and approved the technical information in this presentation.

EXPERIENCED LEADERSHIP

Burns Block

Mr. Pettit | Successfully led and sold the high-grade gold discovery in Ontario to New Gold in 2014.

Copper Canyon

Mr. Termuende | 35 years of experience as a geologist in the mineral exploration industry. Successfully sold Copper Canyon Resources to NovaGold in 2011 for ~$65 million.

Yukon Territory

Mr. Burke is currently a Director and VP Corporate Development of Sitka Gold. Mike served as Head of the Mineral Services Division within the Yukon Geological Survey. Followed the Chief Geologist for 3 Aces Project from 2011-2017.

Opportunity

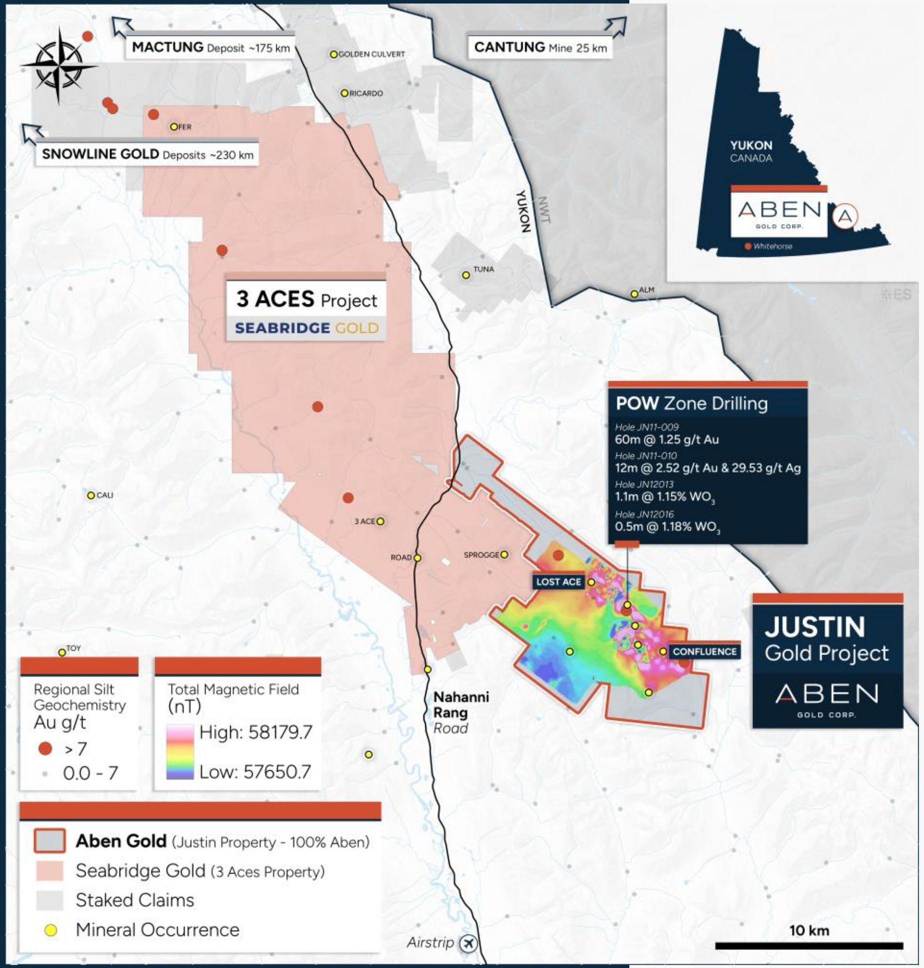
Justin

YUKON TERRITORY

PROPERTY HIGHLIGHTS



Aben's flagship Yukon property has the potential to host both high-grade and bulk-tonnage gold and tungsten zones within two different styles of mineralization.

18,314 ACRES

- 100% Ownership
- Located southeast Yukon
- Adjacent to Seabridge Gold's 3 Aces Project
- 25km to the world-class Cantung Tungsten Mine

4,000 METRES OF DRILLING

- 19 drill holes total
- 10 holes successfully intersecting gold mineralization

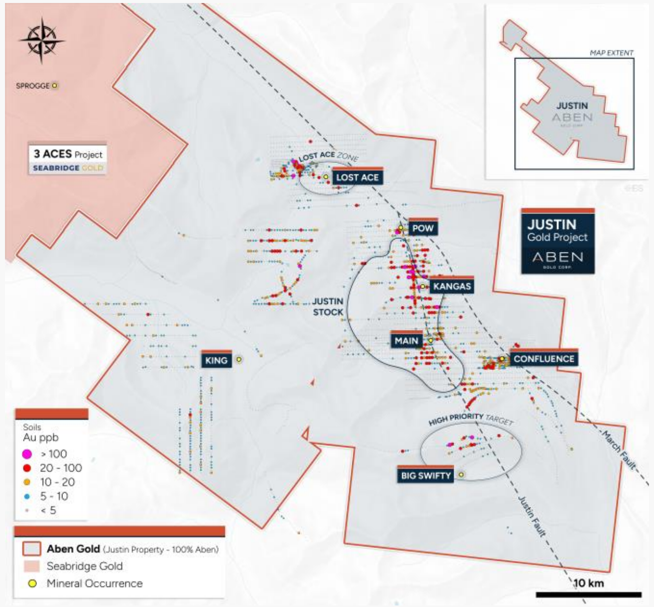
Project Mineralization

Wide-spread mineralization across a trending anomaly measuring 3.5 km long and 0.5 km wide encompassing the Confluence, Main, Kangas and POW Zones.

- POW Zone drilling resulted in greenfields Intrusion related Gold System (IRGS) discovery.
- Proximity of two distinct mineralization styles highlights potential of older orogenic style of mineralization to be incorporated into younger Cretaceous intrusion related mineralization.

Lost Ace Zone

- Channel sampling in 2017 at Lost Ace returned 20.8 g/t Au over 4.4 metres including 88.2 g/t Au over 1 metre
- Has yet to be diamond drill tested



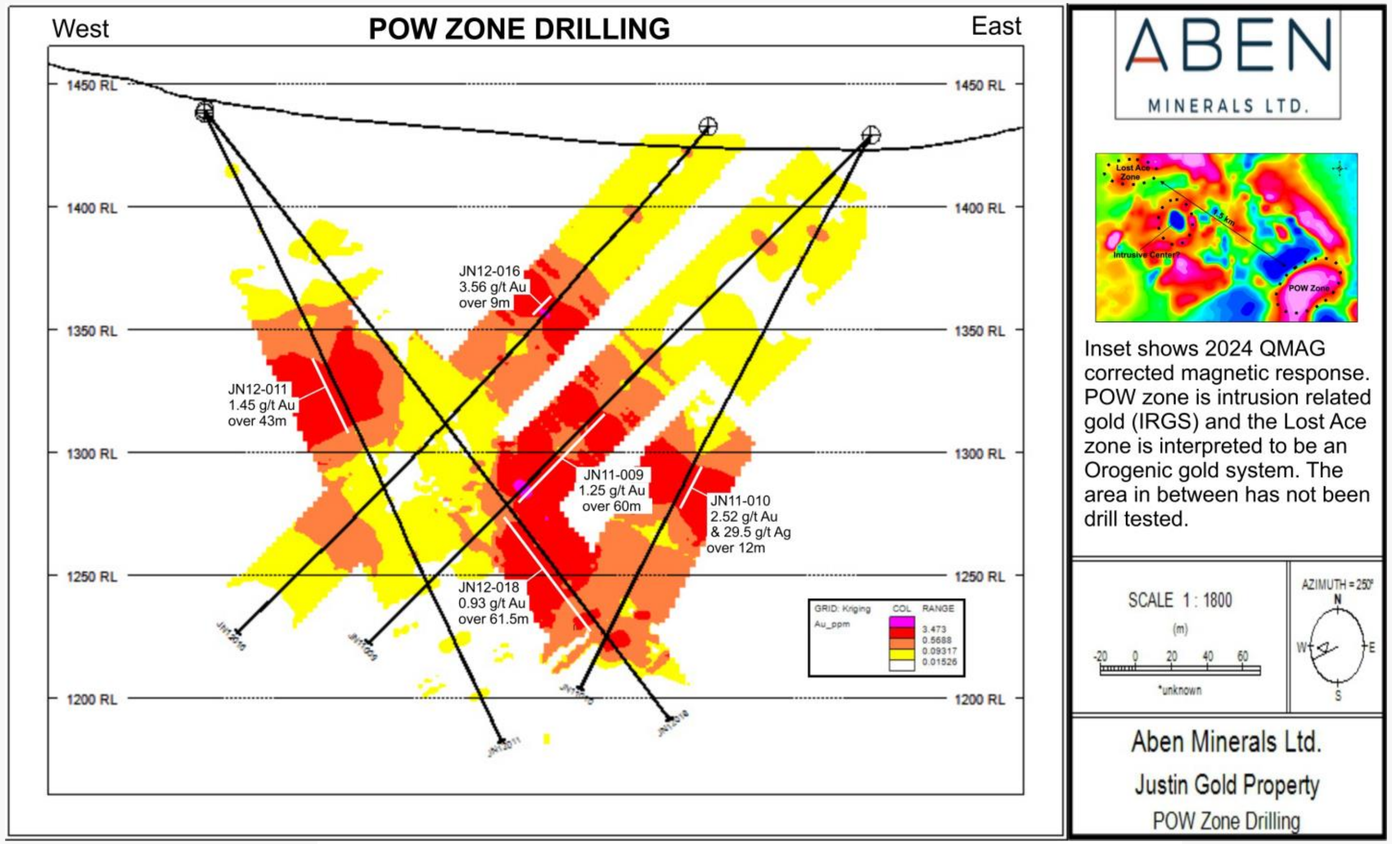
Justin Property Target Zones

High grade gold samples collected within 20 metres from previous 2017 gold grain bulk sample was taken at Lost Ace Zone

Historic Highlights

POW Zone 2011 & 2012

- JN11009 intercepted 60.00 metres of 1.25 g/t gold including 21.0 metres of 2.47 g/t gold
- JN11010 intercepted 12 metres of 2.52 g/t gold and 29.53 g/t silver
- JN12011 intercepted 46.6 metres of 1.49 g/t gold
- JN12016 intercepted 8.50 metres of 0.39% WO_3, including 1.00 metres of 1.12% WO_3. 5.60 metres of 4.12 g/t Au including 2.60 metres of 8.20 g/t Au.
- The last diamond drill program was in 2012. Aben has a fully permitted program scheduled to commence summer 2026. Contractor agreements are in place.

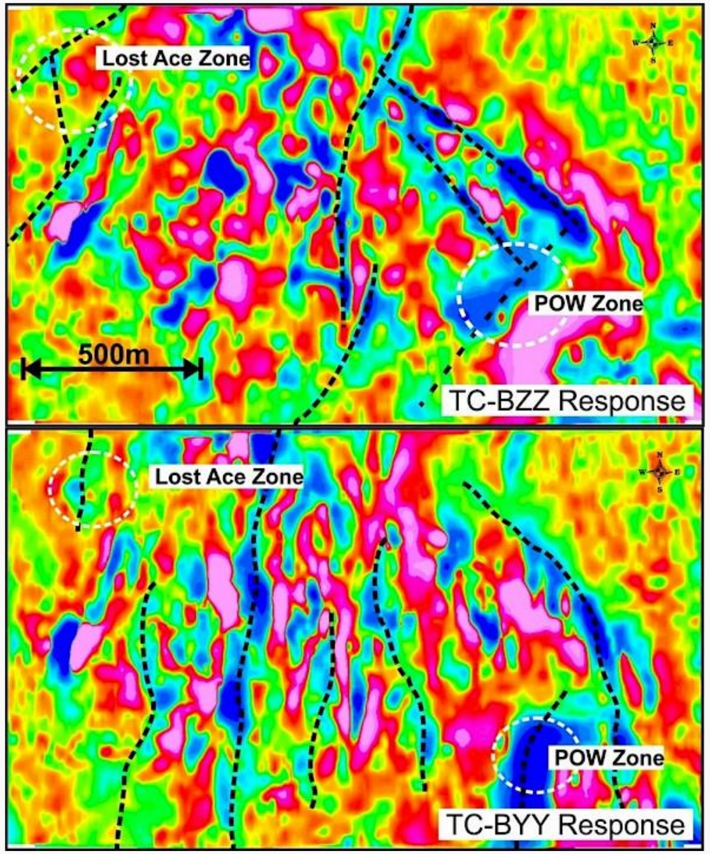


Justin Project Historical Results

Exploration 2026

First Diamond Drill Program Since 2012

- As of September 13, 2026, the Company has completed 1,390.9 metres of diamond drilling in eight holes
- 36 operating days. The program exceeded the original plan of approximately 1,300 metres in six holes.
- Company invested in rebuilding the Justin Project Camp to sustain larger programs
- 5-year Class 3 Quartz Land Permit is active as of May 2026



The annotated magnetic response image below depicts the prevalence of the NNE and NW-SE oriented fault structures that have conducted mineralized fluid outboard of the Justin Stock, located at the bottom margin of each image. Both the Lost Ace and POW zones are located in areas that host complex structural intersections alongside bodies with strong magnetic response. The region between the two zones hosts coincident geophysical and geochemical (gold in soil) anomalies but remains under-explored and undrilled.

2024 QMAGt Survey

Global Tungsten Market

What is Tungsten?

Tungsten (symbol W) has the highest melting point of all metals at 3,422°C and exceptional hardness. It is critical for high-performance industrial, defense and emerging clean energy applications, and is primarily extracted as scheelite and wolframite ores.

Key Applications

Cemented carbides & cutting tools (~65% of global use)

Aerospace & defense (armor-piercing projectiles, missile nozzles, aircraft counterweights)

Electronics (electrodes, heating elements, filaments)

Automotive & electric vehicles (thermal and wear-resistant components)

Market Size & Growth

Global tungsten market valued at USD $5.14 billion in 2025, projected to reach USD $10.45 billion by 2034, at a CAGR of 8.20% (Source: Market Data Forecast, https://www.marketdataforecast.com/market-reports/tungsten-market)

Global Production: China Dominates

China controls over 80% of global tungsten production. Global output totalled ~84,000 metric tons in 2023, with Vietnam and Russia as the only other significant producers. North American production of tungsten ceased in 2015 when the Cantung Mine closed. (https://pubs.usgs.gov/periodicals/mcs2024/mcs2024-tungsten.pdf)

Canadian Tungsten: A Strategic Opportunity

Canada holds ~20% of the world's tungsten reserves

Cantung Mine (NWT): Canada's primary past-producer; ~30,000 tonnes tungsten metal historically produced; closed 2015

Mactung (YK/NWT): One of the world's largest high-grade deposits; 33M tonnes at 0.88% WO_3

U.S. Dept. of Defense invested in six Canadian critical mineral projects in 2025, including tungsten, to re-establish North American supply chains

Tungsten classified as a critical mineral by both Canada and the United States

Justin Project Tungsten

2014 Re-Assay Program — POW Zone, Southeast Yukon

Program Background

The 2014 re-assay program analyzed 230 drill core samples from seven of nine previously drilled holes at the POW Zone for tungsten-specific WO_3 content. Work was initiated after visible scheelite mineralization was identified using short-wave ultraviolet lamps, with anomalous tungsten values noted in prior multi-element ICP data.

Key Assay Highlights from 2011 and 2012 Drill Programs

JN12016: 8.50m @ 0.39% WO_3, incl. 1.00m @ 1.12% WO_3

Coincident with 5.60m @ 4.12 g/t Au, incl. 2.60m @ 8.20 g/t Au

JN12013: 28.90m @ 0.10% WO_3 near surface, plus 1.10m @ 1.15% WO_3

Coincident gold: 7.40m @ 1.81 g/t Au, incl. 2.20m @ 4.42 g/t Au

JN11010: 12.00m @ 0.25% WO_3

JN12019: 7.20m @ 0.27% WO_3

Multiple higher-grade sub-intervals exceeding 1% WO_3 across holes

Why This Matters

Justin is located only 25 km southwest of the past-producing Cantung Mine — one of Canada’s most significant historic tungsten operations

Gold and tungsten mineralization are coincident at the POW Zone — offering a dual-commodity exploration target within a single drill program

Scheelite identified via UV lamp in core; only 7 of 9 holes were re-assayed — additional upside potential remains untested

2026 exploration program is fully permitted, targeting both tungsten and gold through drilling, sampling, and geological modeling

Disclaimer

The tungsten results referenced above are historical in nature. The Company is not treating the historical tungsten results as current mineral resources or mineral reserves.
